

# Elinor

High yielding bulk variety

## Variety description

New variety for the European and North African consumption market. Elinor has good scab tolerance and gives a high yield of large uniform long-oval tubers with yellow skin and light yellow flesh colour. The dry matter is medium depending on the growing conditions. Besides good cooking quality, Elinor also has very good fry figures. Elinor is a robust variety with primary destinations such as North Africa, Southern & Eastern Europe.

### Characteristics

- Usage: Consumption & home frying
- Maturity: Medium
- Yield: High
- Foliage: Nice and covering
- Tuber size: Large
- Tuber shape: Long-oval
- Number of tubers: 10-15
- Skin: Yellow, smooth
- Flesh colour: Light yellow
- Cooking type: AB
- Dry matter content: Medium
- Dormancy period: Medium
- Nematodes: Susceptible
- Wart disease: Susceptible
- Foliage blight: Medium resistance
- Tuber blight: Medium resistance
- Common scab: High resistance
- Virus Y: High resistance

## Growing advice

Elinor needs time to adapt to the outside temperature, so it should not be planted directly from mechanical cooling storage, but after it has adjusted to the outside temperature.

Always plant in good weather, and in good soil conditions. The soil temperature needs to be at least 10°C. Depending on the seed potato size, they should be planted in 10-16 cms' depth - bigger tubers should go deepest.

Only apply fertilizer one time, and preferably at planting. Furthermore make sure that the potassium level in the soil is high enough to avoid discoloration after cooking, but also to improve the storability.

To keep the tubers suitable for consumption during storage, they should be kept in the dark to avoid greening.

Storage of seed potatoes: ≈ 4-6 °C

Storage of ware potatoes: ≈ 6-8 °C
