

# Justbake

Early baker variety

## Variety description

Justbake is a new Danespo variety for baking and consumption. It has good cooking qualities, high dry matter content and a round shape, which fits perfectly to the baker segment. The variety is quite early in its emergence and tuber setting, which provides large round tubers early in the season. The variety generally works well under different conditions, and on both sandy and clay soil.

### Characteristics

- Usage: Baker & consumption
- Maturity: Medium early
- Yield: Medium to high
- Foliage: Nice and covering
- Tuber size: Medium
- Tuber shape: Round-oval
- Number of tubers: 9-12
- Skin: Yellow, smooth
- Flesh colour: Light yellow
- Cooking type: B
- Dry matter content: High
- Dormancy period: Medium to long
- Nematodes: Resistance; Ro1
- Wart disease: Susceptible
- Foliage blight: Medium resistance
- Tuber blight: Medium resistance
- Common scab: Medium resistance
- Virus Y: Medium resistance

## Growing advice

Justbake needs time to adjust to the outside temperature, so it should not be planted directly from mechanical cooling storage, but after it has adapted to the outside temperature. Justbake has a rather quick emergence and tuber setting.

Always plant in good weather and in good soil conditions. The soil temperature should be at least 10°C. Depending on the seed potato size, they should be planted in 12-18 cms' depth - bigger tubers should go deepest.

Only apply fertilizer one time, and preferably at planting. Furthermore ensure that the potassium level in the soil is high enough to avoid discoloration after cooking, but also to improve the storability.

To keep the tubers suitable for consumption during the storage season, they should be kept in the dark to avoid greening.

Storage of seed potatoes: ≈ 4-6 °C

Storage of ware potatoes: ≈ 6-8 °C
