

# Oleva

Robust starch variety

STARCH

FLAKES

DANESPO

## Variety description

High yielding, medium early variety for starch or processing. Stable and rather easy variety to grow.

### Characteristics

- Usage: Starch & processing
- Maturity: Medium early
- Yield: High
- Foliage: Strong and covering
- Tuber size: Large
- Tuber shape: Round-oval
- Number of tubers: 12-15
- Skin: Red
- Flesh colour: Light yellow
- Cooking type: BC
- Dry matter content: Medium to high
- Dormancy period: Medium to long
- Nematodes: Resistance; Ro1, 3, 4
- Wart disease: Resistance; Type 1
- Foliage blight: Medium resistance
- Tuber blight: High resistance
- Common scab: High resistance
- Virus Y: High resistance

## Growing advice

Oleva needs time to adjust to the outside temperature, so it should not be planted directly from mechanical cooling storage, but after having adapted to the outside temperature. The seed can be preheated before planting.

Always plant in good weather and in good soil conditions. The soil temperature should be at least 8°C. Depending on the seed potato size, they should be planted in 10-16 cms' depth - bigger tubers should go deepest. Oleva is suitable for early planting.

Only apply fertilizer one time, and preferably at planting. Furthermore ensure that the potassium level in the soil is high enough, in order to improve the storability.

To keep the tubers suitable for processing during the season, they should be kept in the dark to avoid greening.

Storage of seed potatoes: ≈ 4-6 °C

Storage of starch potatoes: ≈ 8 °C
