

# Ydun

High yielding starch variety with wide nematode resistance

## Variety description

Starch variety with a high yield potential and a very stable starch content from year to year.

### Characteristics

- Usage: Starch
- Maturity: Late
- Yield: High
- Foliage: Strong, covering and robust
- Tuber size: Medium
- Tuber shape: Round
- Number of tubers: 12-18
- Skin: Yellow
- Flesh colour: Yellow
- Cooking type: CD
- Dry matter content: High
- Dormancy period: Medium
- Nematodes: Resistance; Ro1, Pa2, Pa3 (7)
- Wart disease: Resistance; Type 1
- Foliage blight: High resistance
- Tuber blight: Medium resistance
- Common scab: Medium resistance
- Virus Y: Medium resistance

## Growing advice

Ydun needs time to adapt to the outside temperature, so it should not be planted directly from mechanical cooling storage, but after it has adjusted to the outside temperature. The seed can be preheated before planting.

Always plant in good weather and in good soil conditions as soon as the soil temperature reaches 8°C, due to the lateness of the variety. Depending on the seed potato size, they should be planted in 12-18 cms' depth - bigger tubers should go deepest.

Only apply fertilizer one time, preferably at planting. Ydun only needs a medium N-level to avoid late maturing. Furthermore make sure that the potassium level in the soil is high enough, in order to improve the storability.

Storage of seed potatoes: ≈ 4-6 °C

Storage of starch potatoes: ≈ 8 °C
